

# The Ghana Cocoa Report 2024: Ghana Cocoa Value-Added Products: Transforming the Industry for Economic Growth

Explore Ghana's cocoa value-added product sector, key statistics, critical analysis, and recommendations for enhancing domestic cocoa processing and export revenue.

## Highlights

Explore the transformative impact of value-added cocoa products on Ghana's economy.

Discover key statistics on Ghana's position in global cocoa production and value addition.

Learn about the challenges and opportunities in expanding Ghana's cocoa value chain.

## Content

Ghana's Cocoa Value-Added Products: Transforming the Industry for Economic Growth

### Highlights:

Explore the transformative impact of value-added cocoa products on Ghana's economy.

Discover key statistics on Ghana's position in global cocoa production and value addition.

Learn about the challenges and opportunities in expanding Ghana's cocoa value chain.

**Research Methodology:** This article is based on a comprehensive review of industry reports, government data, academic papers, and trade publications to provide a detailed analysis of Ghana's cocoa value-added product sector. Data were extracted from sources such as the International Cocoa Organization (ICCO), the Ghana Cocoa Board (COCOBOD), and global trade databases. The analysis focuses on production trends, economic impact, and potential for growth within the value-added segment.

### Key Statistics and Facts:

1. Ghana is the world's second-largest cocoa producer, responsible for 20% of global cocoa supply.
2. Cocoa beans account for 70% of Ghana's agricultural export revenue, but only 10% of exported cocoa is processed into value-added products domestically.
3. Ghana's cocoa industry employs over 800,000 smallholder farmers.
4. Value-added cocoa products such as chocolate, cocoa butter, and powder contribute less than 15% to Ghana's GDP from the cocoa sector.
5. Global demand for chocolate is expected to grow by 3.3% annually between 2023 and 2028, providing opportunities for Ghana's value-added sector.
6. Ghana's current processing capacity is about 300,000 metric tons of cocoa, though it produces over 900,000 metric tons annually.
7. The export value of semi-finished cocoa products (butter, liquor, and powder) was USD 1.1 billion in 2023.
8. Local cocoa processors face a 30% higher cost than international competitors due to infrastructure and financing challenges.
9. Ghana launched the "Chocolate Week" initiative to boost local consumption and awareness of value-added products.
10. Government aims to increase domestic cocoa processing to 50% of total production by 2025.

## Body of Article/Critical Analysis

### Introduction

Ghana's cocoa industry is a cornerstone of the nation's economy, yet its potential remains underutilized due to a limited focus on value-added cocoa products. The majority of Ghana's cocoa is exported as raw beans, leaving substantial untapped revenue that could be generated from processing cocoa into finished products such as cocoa powder, butter, liquor, and chocolate. In this analysis, we explore the economic implications of focusing on value-added cocoa products and examine the critical factors that could drive or hinder this transformation.

### The Importance of Value-Added Cocoa Products

Ghana's heavy reliance on raw cocoa bean exports has meant that much of the value is captured abroad in processing and final product creation. By increasing its share of value-added cocoa products, Ghana could significantly enhance its export revenue, create jobs, and foster innovation in the cocoa sector. Currently, processed cocoa products such as cocoa liquor, butter, and powder contribute far less to GDP than raw bean exports, but global market trends suggest there is substantial room for growth.

The global chocolate and confectionery industry is experiencing consistent demand, particularly in emerging markets. By expanding local processing, Ghana could position itself as a leading exporter not only of raw materials but also of high-value products. This shift would reduce economic vulnerability to fluctuating global cocoa prices and increase the resilience of the cocoa sector.

### Factors Impacting Ghana's Cocoa Value-Added Sector

1.

**Processing Infrastructure:** Ghana's cocoa processing infrastructure remains underdeveloped. The country currently processes about 30% of its cocoa, far behind the potential that could be unlocked with modern equipment and investment in technology.

2.

**Energy Costs:** High energy costs pose a significant barrier for domestic processors. Industrial energy prices in Ghana are considerably higher than in competitor countries like the Netherlands and Malaysia, reducing the competitiveness of Ghanaian cocoa processors.

3.

**Financing and Access to Capital:** Domestic processors often struggle with limited access to affordable credit. Interest rates in Ghana can reach up to 30%, making it difficult for firms to finance the expansion of processing capacity.

4.

**Global Market Access:** Exporting value-added products involves navigating stringent international trade regulations, particularly in markets like the European Union and the United States, where product quality and safety standards are high.

5.

**Domestic Demand:** Low local consumption of cocoa products hinders the growth of the value-added sector. Initiatives like Ghana's "Chocolate Week" aim to boost domestic consumption, but the impact has been limited so far.

6.

**Quality Control:** Maintaining high-quality standards is crucial for Ghanaian cocoa products to compete globally. Value-added products require strict adherence to international quality benchmarks, which necessitates investment in quality control infrastructure.

7.

**Research and Development:** Investment in research and development (R&D) to innovate new cocoa products is minimal. Encouraging partnerships between universities, government, and the private sector could foster new product development.

8.

**Government Policy:** The Ghanaian government has introduced policies to encourage local processing, such as tax incentives for processors. However, these policies have not yet yielded significant results, as they are often underfunded and inconsistently implemented.

9.

**Labor Costs:** Labor-intensive processing requires skilled workers, and the cost of training and retaining such labor is a challenge. Developing a robust labor force for the value-added sector is key to increasing production capacity.

10.

**Sustainability Initiatives:** International consumers are increasingly prioritizing sustainable and ethically sourced products. Ghana has made strides in promoting sustainable cocoa farming practices, but further investments in certifications and environmental compliance will be essential for maintaining market access.

## Projections and Recommendations

Looking ahead, Ghana's value-added cocoa sector holds immense potential if key obstacles can be addressed. The government's target of processing 50% of all cocoa domestically by 2025 is ambitious but achievable with the right investments in infrastructure and policy support. Increased access to financing, reduction of energy costs, and stronger domestic demand could dramatically shift the industry's trajectory. Moreover, enhancing Ghana's global brand as a source of premium, ethically-produced cocoa products could open new export markets.

Encouraging public-private partnerships in cocoa research and processing technology could drive innovation. Additionally, government support in reducing trade barriers and improving market access for value-added cocoa products will be crucial for scaling up production.

## Conclusions

The shift toward value-added cocoa production represents a vital opportunity for Ghana to capture more value from its primary export commodity. By investing in processing capacity, reducing operational costs, and creating an enabling environment for innovation and market access, Ghana can secure its position as a global leader in the

cocoa value chain. The economic benefits of this transformation, including increased revenue, job creation, and greater economic stability, could be substantial if the right strategies are implemented.

## Notes

Ghana is making progress, but substantial investment and reform are needed to fully realize the potential of the value-added cocoa sector.

Partnerships with international brands and investors can accelerate the development of the local cocoa processing industry.
